

Use-Case Flow Specification

Virtual Technical Conference Platform — Core Use Case: Generate Conference Schedule

1. Use Case

Generate Conference Schedule — The Track Chair generates a conflict-free multi-track presentation schedule using accepted papers, room capacities, and speaker availability.

2. Preconditions

- Papers have been accepted for presentation.
- Conference tracks and presentation sessions have been defined.
- Available rooms and their capacities are recorded in the system.
- Speaker availability information is available.

3. Postconditions

- A conflict-free conference schedule is generated.
- Each presentation is assigned to an appropriate session and room.
- Speakers are not scheduled during unavailable time periods.

4. Main Success Scenario

1. Track Chair selects **Generate Conference Schedule**.
2. System retrieves accepted papers and presentation requirements.
3. System retrieves available rooms and their capacities.
4. System retrieves speaker availability.
5. System assigns presentations to suitable sessions and rooms.
6. System checks the generated schedule for conflicts.
7. System generates the final multi-track conference schedule.
8. System displays the schedule to the Track Chair.

5. Alternate Flow — Scheduling Conflict

- A1. System detects a conflict involving room capacity or speaker availability.
- A2. System identifies the presentation causing the conflict.
- A3. System searches for another suitable session or room.
- A4. If a valid alternative is found, the system updates the schedule and continues.
- A5. If no valid alternative is found, the system alerts the Track Chair to resolve the conflict manually.
